

# **LINUXIFY PROJECT PROGRESS REPORT**

---

Presented By  
LINUXIFY TEAM

We are writing to provide you with the final progress report for our web-based Linux user management project. As outlined in the original project requirement document, our initial objective was to develop a web application for Bank user that support backend system operations, including the creation, deletion, and updating of user accounts. However, we recently received instructions from our system and network administration instructor to change the project scope in a new direction.

### **Revised Project Scope:**

Upon consultation with our project manager and discussions within the Linuxify team, we decided to pivot our project to focus on assisting Linux users in managing their accounts, and incorporating additional feature to enhance the user management experience. We apologize for any inconvenience caused by this change in the project's direction.

### **Project Progress:**

Following the adjustment in project scope, our team engaged in extensive discussions to understand the implications and requirements of the new direction. Leveraging our existing infrastructure insights, we proceeded with the development phase. We are pleased to announce that we have successfully completed the project based on these insights.

### **Accomplishments:**

1. **User Account Creation:** Our team has implemented a robust system that allows Linux users to create new accounts. The process has been designed to be streamlined and user-friendly, ensuring a smooth experience for our target audience.
  2. **User Account Deletion:** We have also incorporated a feature that enables authorized users to delete existing Linux user accounts. We have implemented appropriate security measures to ensure that only approved individuals can exercise this functionality.
  3. **Additional Features:** In addition to the core functionalities of creating and deleting user accounts, we have introduced extra features to enhance the overall user management experience. These features include password management, user role assignment, and customizable access control.
- 

**Challenges:**

The change in project scope presented several challenges for our team. Adapting to the new direction required additional analysis and a shift in our development strategy. However, through effective communication and collaboration, we successfully navigated these challenges and achieved the project's objectives.

**Conclusion:**

In conclusion, the Linuxify team has successfully delivered the web-based Linux user management system as per the revised project scope. Our solution provides Linux users with a user-friendly interface to create, delete, and manage user accounts, along with additional features to enhance user management capabilities.

Moving forward, we recommend conducting thorough testing and quality assurance procedures to ensure the system's reliability and security. Additionally, we suggest providing adequate documentation and training materials to assist users in effectively utilizing the new functionalities.

We sincerely apologize for any inconvenience caused by the change in features. We appreciate your understanding and support throughout the project.

Thank you for your guidance and valuable input during the course of this project.

Best regards,

Linuxify team
